## What's new in the 4.0.0 release

This release includes the following enhancements. In addition, this release resolves the issues listed in the **Resolved Issues** section.

### Enhancements

Client Proxy supports the following enhancements in this release:

- **Big Sur MacOS operating system** - Supports macOS Big Sur 11.2 and later

We recommend macOS Big Sur 11.2 and later for Client Proxy 4.0.0 as we have experienced some issues while using Client Proxy 4.0.0 with macOS 11.1. Apple Inc. has confirmed this issue and is being taken care of in macOS Big Sur 11.2 and later.

- **Apple's M1 processor** - Supports Apple's M1 processor architecture using Apple's Rosetta 2 translator
- **Secure Channel** - You can secure the communication between Client Proxy and McAfee WGCS. This feature is applicable only for cloud proxies.

---

## Resolved issues in the 4.0.0 release

For a list of current known issues, see [McAfee Client Proxy Known Issues \(KB83131\)](#).

## Resolved issues

Reference	Resolution
MCP-3493	McAfee Agent updates the Client Proxy policy every 60 minutes from McAfee ePO.
MCP-3592	The alternate proxy server status is now displayed in the <b>About</b> McAfee Client Proxy dialog box. (Windows only)
